PHOTOGRAMMETRIC COMPUTER VISION and IMAGE ANALYSIS Conference

ISPRS Technical Commission III Symposium

September 1-3, 2010

Paris France

PCV is an ISPRS selective conference covering all the aspects of computer vision and image analysis dealing with geomatics data (or geographic data). Papers in the main technical program must describe high-quality, original research and will be presented either orally in a single track or as a poster.

PCV focuses on the processing of:

- essentially optical images and 3D point clouds, acquired from satellite, aerial or street level acquisition systems.
- data which are all acquired with the perspective of generating accurate and robust 3D models, digital maps and data bases, for 3D mapping or geographical multimedia applications or applications needing “maps of the environment” as an input such as for example robotics and autonomous navigation.

Contributions are sought on new and original research on any aspect of photogrammetric computer vision and image analysis. The 2010 Symposium will have special sessions to cover all of the ISPRS Technical Commission III Working Groups as well as the Intercommission Working Groups.
