HISTORICAL DATA

The Canadian Institute of Surveying began in the year 1882 as the Association of Dominion Land Surveyors. In 1934 the name was changed to The Canadian Institute of Surveying and in 1950 it was again changed, to The Canadian Institute of Surveying and Photogrammetry. At the Annual Meeting of 1957 it was decided to revert to the name of The Canadian Institute of Surveying.

The Association of Dominion Land Surveyors held its first annual meeting at Ottawa in 1884 and continued to hold annual meetings until 1894. For the next twelve years the Association was inactive, but in 1907 it was revived and held another annual meeting at Ottawa. Annual meetings have been held each year since then with the exception of 1916, and these meetings are dated from 1907. For this reason, 1957 is observed as the fiftieth anniversary, although it is, in fact, the seventy-fifth anniversary.

For most years in which annual meetings have been held, the Institute, under its several names, has issued publications of some kind. In the early years, publication was once per year only and consisted of reports of the annual meetings. These publications were sometimes called *Annual Reports* and sometimes *Proceedings of Annual Meetings*, but they can always be identified by the year of issue. In 1922, the Institute began to publish, in addition to the reports of annual meetings, a quarterly publication which it called *The Journal of the D. L. S. Association*. In 1925 the name of this publication was changed to the *Journal of the D. L. S. and O. L. S. Association*, and in 1926 the present name, *The Canadian Surveyor*, was adopted. In 1954, the issue containing the report of the annual meeting was incorporated into the volume as a fifth issue for the year, so that the publications of the Institute now number one *only*—*The Canadian Surveyor*, published five times yearly. Volumes I to X, 1922, each began with a July issue and ran for three years, ending with an April issue. This system being thought illogical, Volume XI, consisting of six numbers only, was ended with the October, 1953, issue. Volume XII then began with the issue of January 1954, and each volume now consists of ten issues, covering two calendar years. Because publication of the *Journal of the D. L. S. Association* and *The Canadian Surveyor* has been continuous since 1922, a reference to the latter may also be construed as a reference to the former, depending on the date of issue.

A complete list of the Institute's publications to July, 1956, compiled by Mr. John Carroll as an appendix to his *History of the Canadian Institute of Surveying and Photogrammetry*, may be found on pages 464 and 465 of *The Canadian Surveyor*, vol. XIII, No. 7, April, 1957. A list of libraries which bind and catalogue the publications appears on page 444 of the same issue. It is believed that the only complete set in existence is that contained in the library of the Geological Survey of Canada, Department of Mines and Technical Surveys, Ottawa.

This index, the need for which has long been felt, is issued as a part of the fiftieth anniversary commemorative programme. It is complete to vol. XII, No. 10, the final issue for 1955. In order to keep the index reasonably up to date, the Institute intends to publish a supplementary index at the end of each volume hereafter. The first such supplementary index, covering volume XIII, will appear in the October, 1957, issue, which will be number 10 of that volume.

CANADIAN SURVEYOR INDEX

EXPLANATIONS

References to the ANNUAL REPORTS and PROCEEDINGS are identified by "Ann. Rept." (or "Proc.") followed by the year of issue and inclusive paging, e.g. Proc. 1945: 47-53 Ann. Rept. 1926: 36-40.

References to THE CANADIAN SURVEYOR are given in the form: *volume (number of issue): inclusive paging.*
e.g. 9(8): 15-19.

Beginning with vol. 12 the issue number is omitted because that volume is continuously paged. Previous volumes had separate paging for each issue.

When the author's name is used as entry, it is given in caps.
e.g. FIELD, R. H.

When entry is under a personal name used as subject, it is not capitalized, e.g. Field, R. H. (i.e. *about*, not *by* Field)

When entry is under title, either direct or inverted, the author's name is given in brackets after the title.
e.g. Assessment Survey (R. W. Cautley)

Most entries, other than those under author, are *title* or *derived from title*. In a few cases, when the title gives inadequate or no indication of the subject matter, suitable subject entries have been supplied.
